

Information Note 1/2019 (2019-04-24) for the members of the IAEA/WHO SSDL Network

Implementation of ICRU 90 changes

This Information Note is sent together with a letter "[Notification of changes to the IAEA dosimetry standards according to ICRU Report 90](#)". This letter is prepared to inform all the SSDLs of changes to IAEA dosimetry standards following the recommendations of the International Commission on Radiation Units and Measurements (ICRU) published in the Report 90 "Key Data for Ionizing-Radiation Dosimetry: Measurement Standards and Applications" in October 2016. The changes came into effect on 1st of January 2019.

IDOS 2019

The International Symposium on Standards, Applications and Quality Assurance in Medical Radiation Dosimetry (IDOS 2019) will be organized this summer. The symposium provides a forum at which advances in radiation dosimetry can be disseminated and scientific knowledge exchanged. Remember to register and I look forward to meeting you there!

Annual reports

Dosimetry Laboratory Network database ([DOLNET](#)) and the web based annual reporting is still not open and we are currently collecting the annual reports manually. Part of this process is aimed to clean the data and to do an individual review of all annual reports. Therefore, the process is delayed, and you might not have received the request yet.

SSDL Newsletter

The SSDL Newsletter issue No. 69 will be published soon. We are also preparing another special issue of the SSDL Newsletter which will be dedicated to Dosimetry Audits. These and all other Newsletters are available on our [publications website](#).

Best regards,

Paula Toroi, SSDL Officer
